The drawings are objected to as failing to comply with 37 CFR 1.84(p)(5) because they do not include the following reference sign(s) mentioned in the description: apparatus 100 (page 8, lines 1 and 2). A proposed drawing correction or corrected drawings are required in reply to the Office action to avoid abandonment of the application. The objection to the drawings will not be held in abeyance.

The disclosure is objected to because of the following informalities: "186" (paragraph 31, line 5) should be --286-- and "184" (paragraph 31, line 6) should be --284--. Appropriate correction is required.

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

(e) the invention was described in a patent granted on an application for patent by another filed in the United States before the invention thereof by the applicant for patent, or on an international application by another who has fulfilled the requirements of paragraphs (1), (2), and (4) of section 371(c) of this title before the invention thereof by the applicant for patent.

Claims 13, 17-20 are rejected under 35 U.S.C. 102(e) as being anticipated by Bertschi.

Bertschi discloses a first gate assembly 53 coupled to an outlet of a first sprue bar element 42, a second gate assembly 52 coupled to an inlet of a second sprue element 43, wherein the inlet of said second sprue bar element 43 receives a melt stream of moldable material from the outlet of said first sprue bar element when said

Art Unit: 1722

gate assemblies are moved from a first position shown in Fig. 2 to a second position when the inlet and outlet are aligned as shown in Fig.1.

Claims 1-12, 14-16 are allowable since the prior art fails to disclose or suggest a first and/or second gate assembly movable to restrict the flow of melt from a first and second sprue channel when the flow of melt stream between a first sprue channel and a second sprue channel is interrupted as set forth in claims 1, 14 and 15.
